PERFORMANCE

Maximize international sales with Performance 5

Shopping around the corner and across the globe

AI is ushering in a new era of cross-border experiences, making the world even more accessible by further collapsing the distances that used to stand between us.

Technology is helping enable globally viral social media trends, complex real time translations and personalized product recommendations.

People are increasingly using these advances to make purchases from around the corner and across the globe, meeting their growing need for an abundance of options.

48%

of shoppers made a cross-border purchase in past 6 months.¹

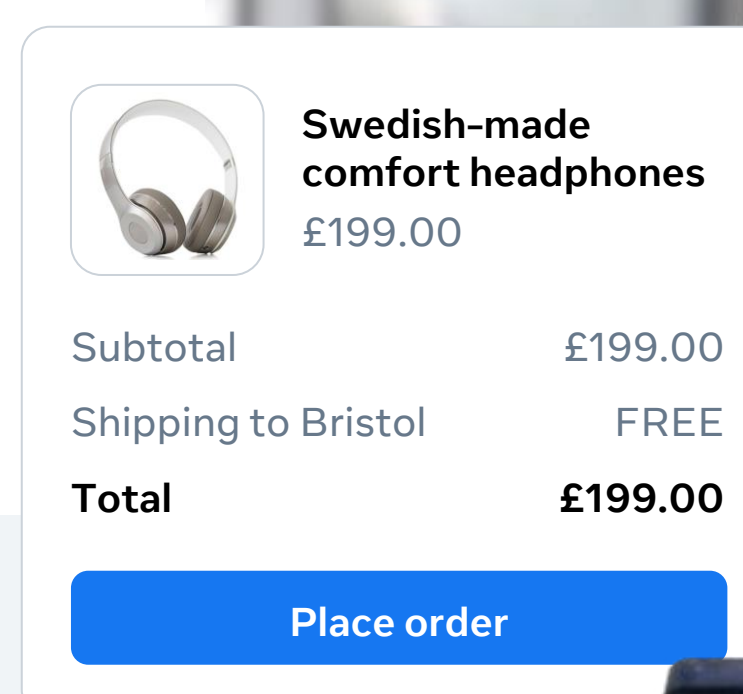

61%

of cross-border shoppers want to have a large selection of products to choose from.¹

Shoppers are growingly buying internationally during major sales moments

53%

global year-over-year uplift in cross-border sales on Black Friday/Cyber Monday weekend.²

The growth of cross-border shopping is setting the stage for a commercial landscape that could be predominantly international

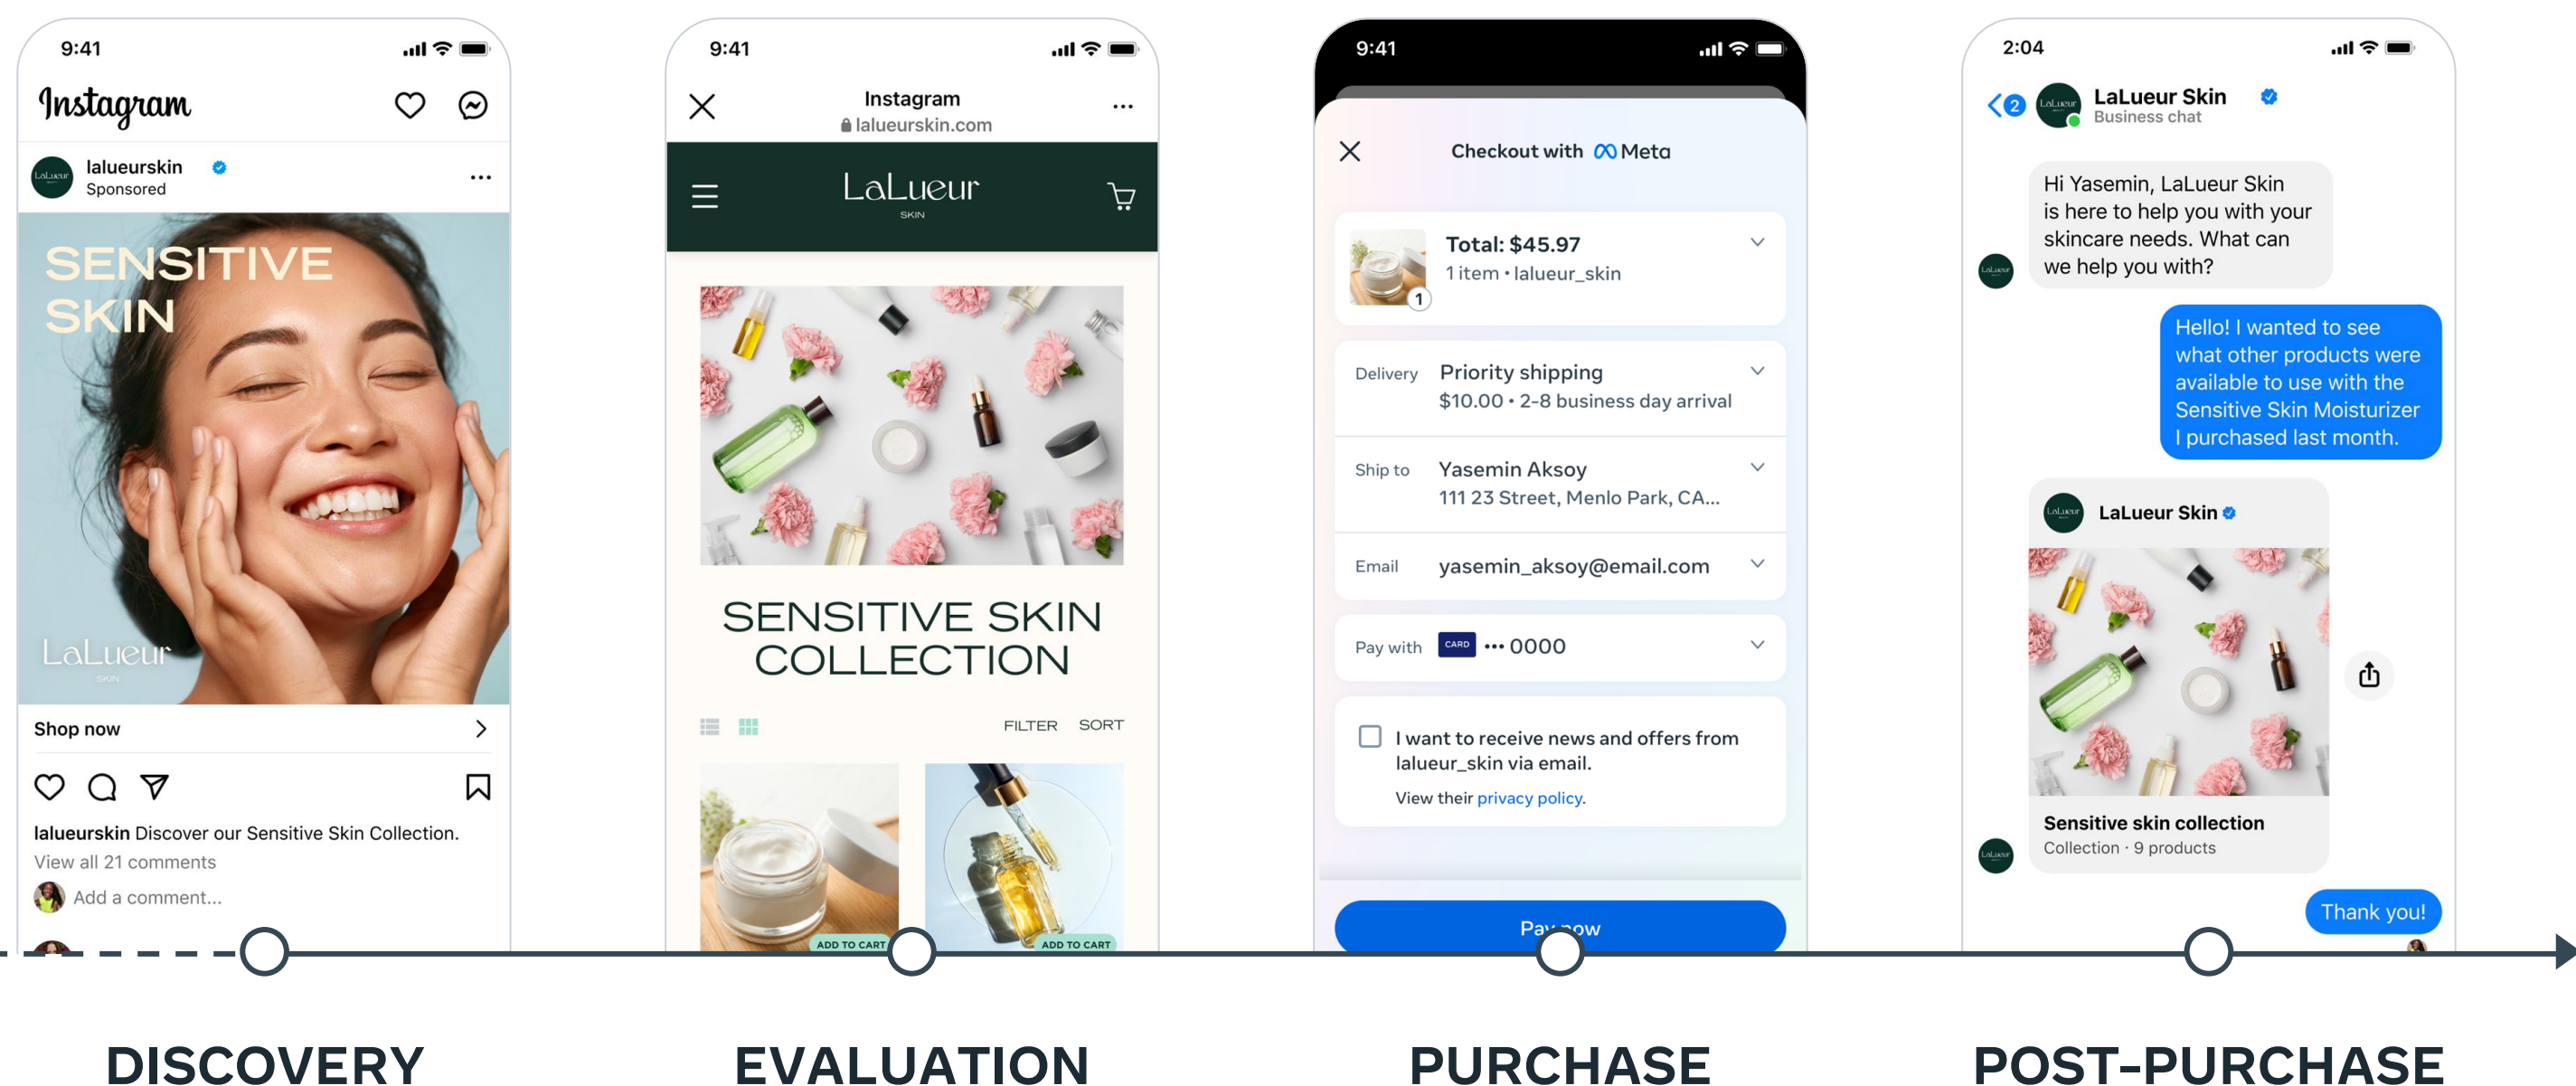

2x

faster cross-border trade growth³
(107%) versus domestic growth (48%)
in the next 5 years

\$3.3T

predicted value of cross-border eCommerce in 2028.³

Meta is people's go-to platform across all steps of the cross-border shopping journey¹

Meta technologies:

Unlock cross-border performance with tailored Performance 5 best practices

FIVE MEDIA BEST PRACTICES TO DRIVE CROSS-BORDER SALES

1 Account simplification

2 Automation

3 Creative diversity

4 Data quality

5 Results validation

BEYOND MEDIA

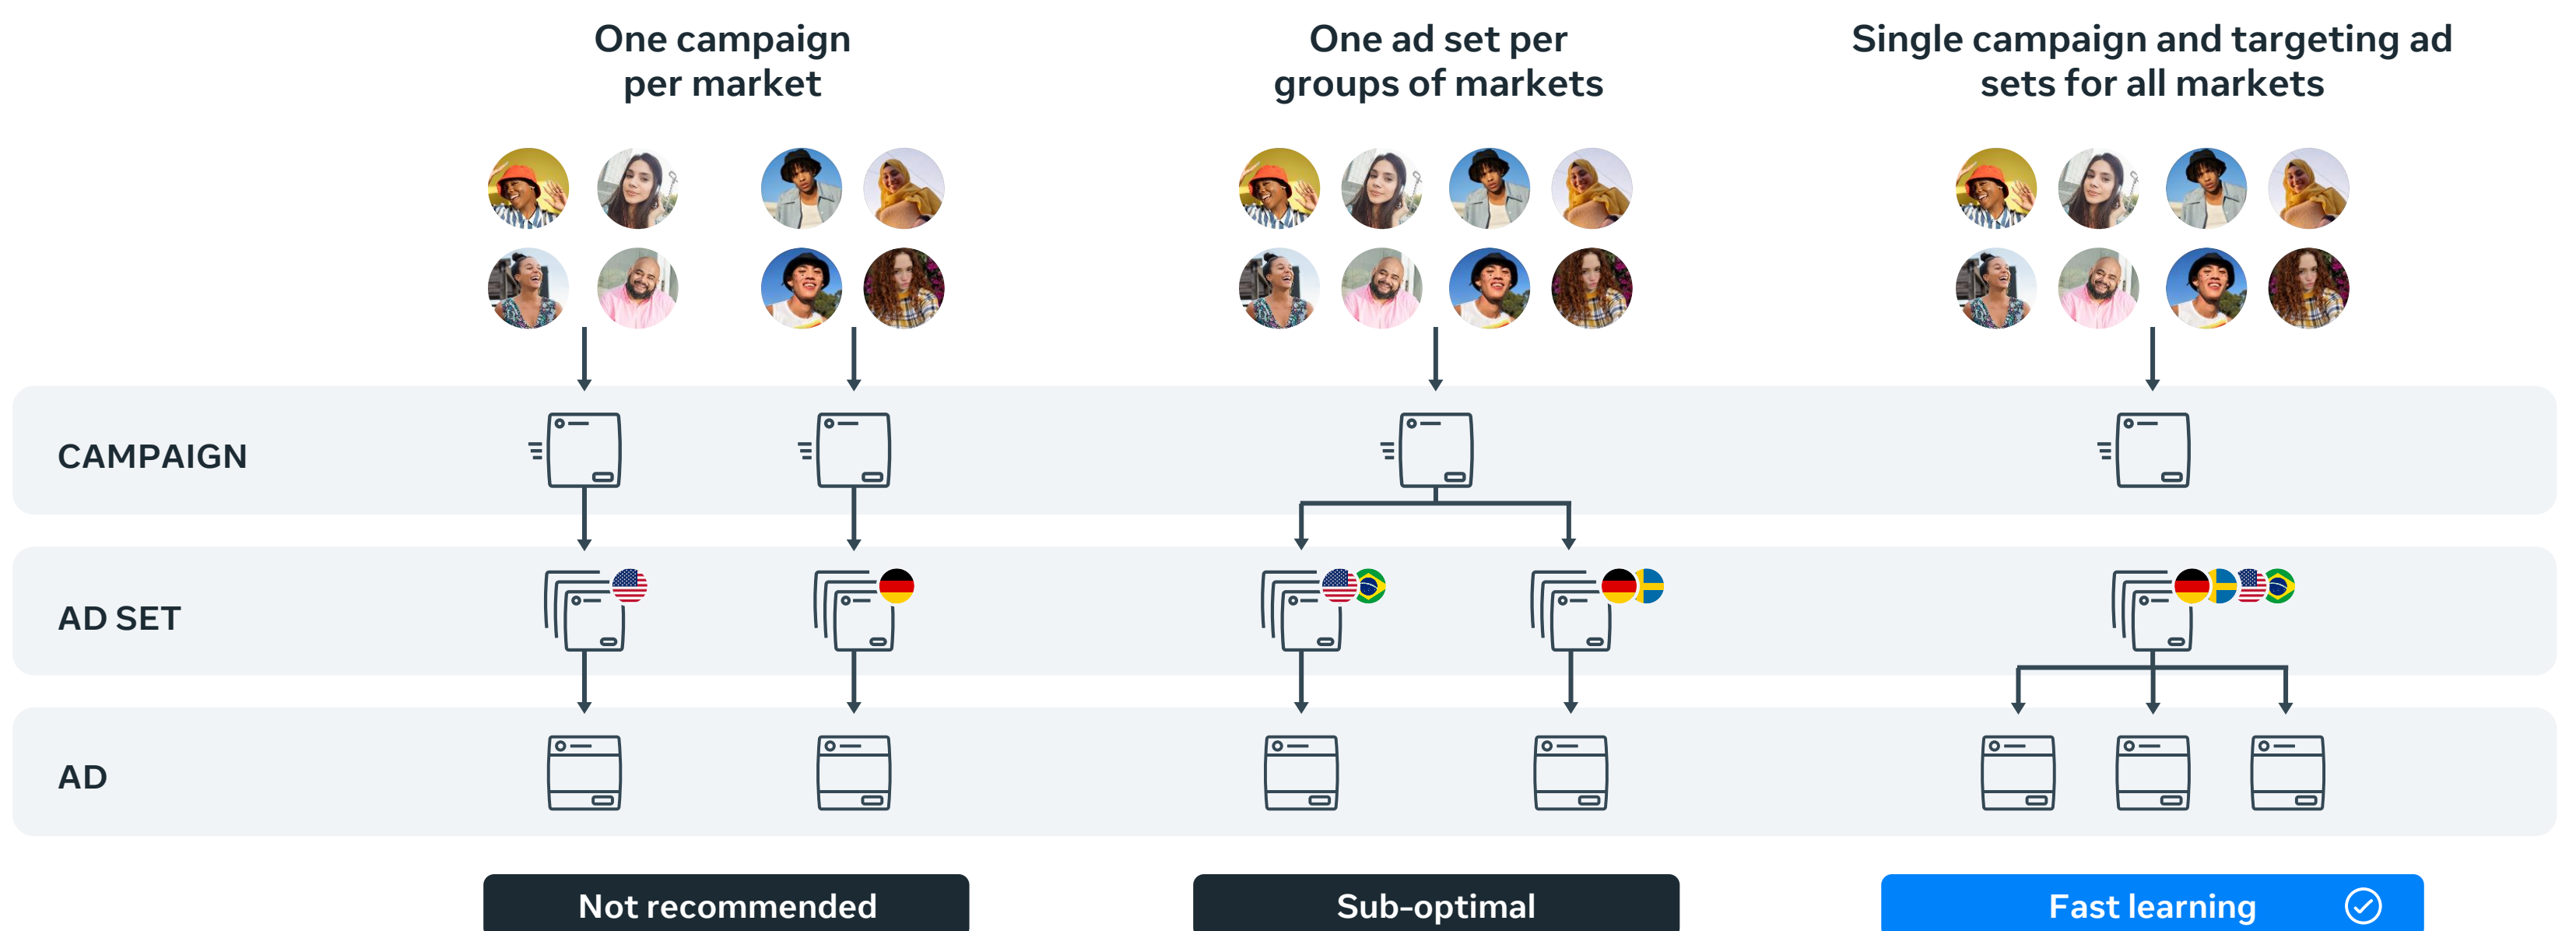

+ Cross-border operations

1 Account simplification

Performance marketing has historically focused on detailed segmentation to increase relevance. Today, a larger pool of opportunities helps AI learn across different demographics, regions and cultures.

SOLUTION

Simple account structures produce more opportunities to reach customers.
This enables AI to learn quickly and deliver more efficient results.

KEY INSIGHT

When a campaign starts running, each ad set goes through an initial “[learning phase](#)”. Simplifying account structures helps AI systems learn and get the results you need faster.

28%

lower cost per purchase for ad sets that had more than 50 events per week.¹

19%

lower cost per result for ad sets that successfully exited the learning phase.¹

RECOMMENDATION

Consolidate destination markets to simplify your account.

If grouping all markets in one ad set is unfeasible, test grouping markets by similarities such as:

- Profitability / lifetime value
- Purchase drivers
- Culture / language
- Trending categories

Use spending limits on market groups only when necessary.

Though full budget automation is most likely to drive better results, if you need more control over how your budget is distributed across markets you can set min/max spending limits with Advantage campaign budget.

2 Automation

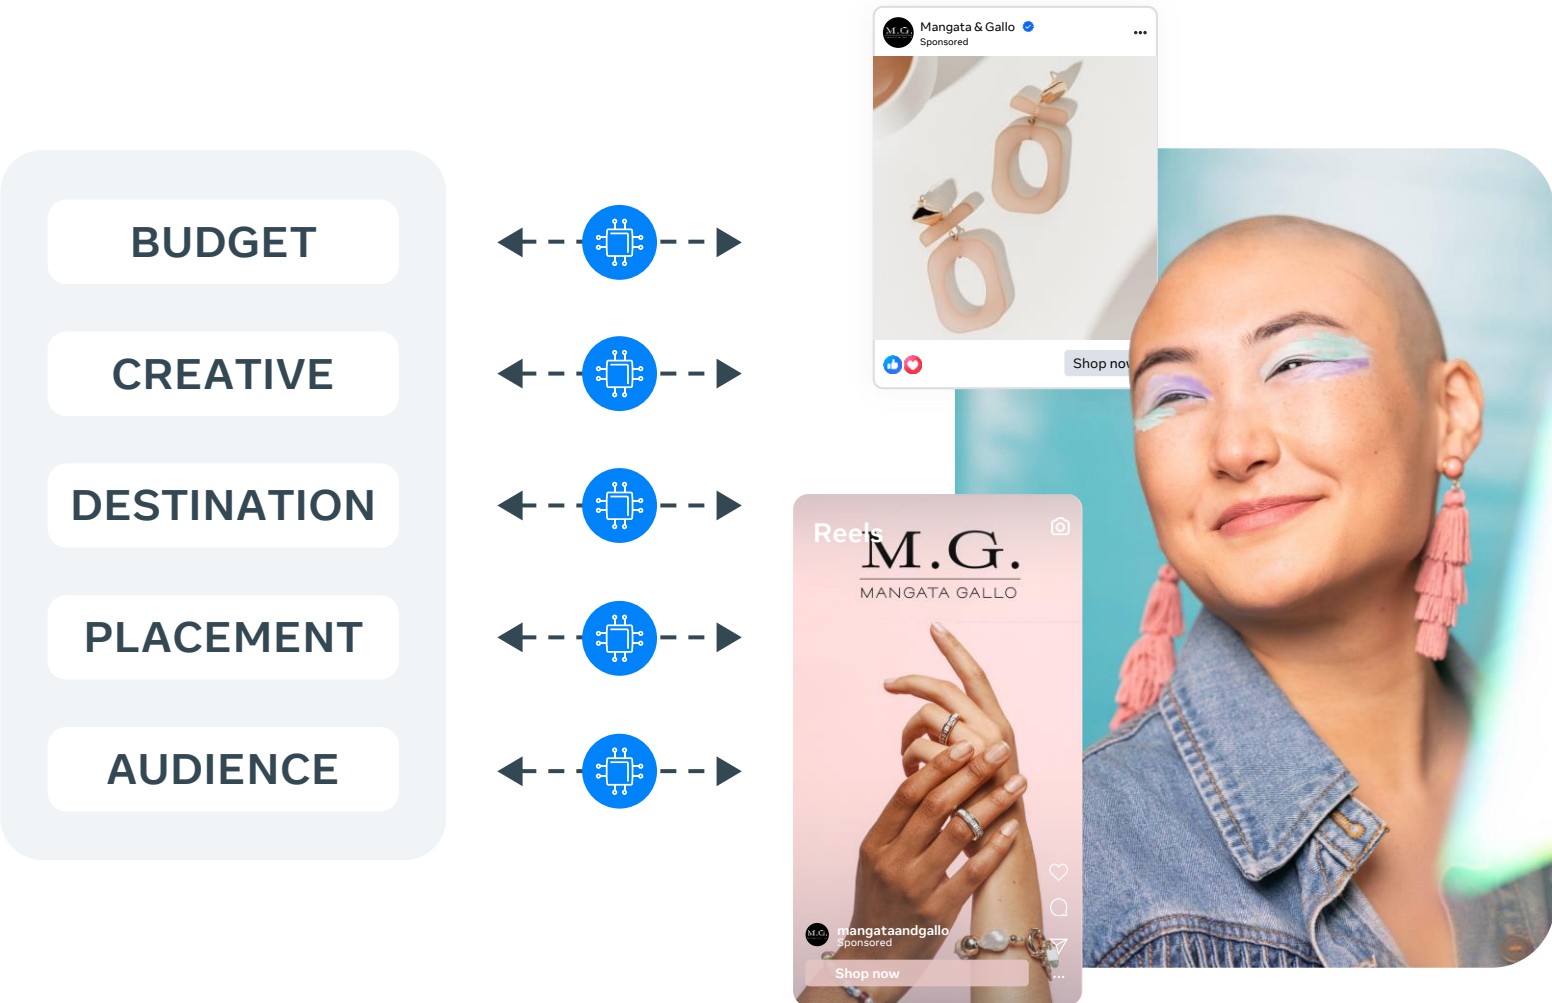

When advertising in a new destination, marketers are faced with many unknowns.

				
Budget	Creative	Destination	Placement	Audience
How do I divide my budget across regions?	Which creative resonates the best with different shoppers?	How can I proactively reach the most promising audience?	Which platforms do locals engage with the most?	Will people convert better on my site or shops?

Leading marketers are leaning on [automation](#) to optimize performance across all campaign levers

SOLUTION

[Advantage+ shopping campaigns](#) helps drive international sales efficiently. Advantage+ shopping campaigns optimizes across multiple campaign levers including budget, creative, destination, placement and audience.

KEY INSIGHT

32% increase in return on ad spend with Advantage+ shopping campaigns.¹

Source: 1. Meta internal study on 31 advertisers from NA, APAC, EMEA and LATAM from July-Sept 2022. The results were based on 10 experiments (Meta A/B split tests) across multiple verticals in NA to measure performance of their Meta campaigns to retarget custom audiences. All tests were run between Feb 2023 - April 2023. 2. Meta-Analysis of 83 A/B tests running in the period of 3 March 2023 and 1 October 2023 across 13 verticals, including Business to Business, Consumer Packaged Goods, E-commerce, Education, Entertainment and Media, Gaming, Healthcare, Pharmaceuticals and Biotech, Professional Services, Restaurants, Retail, Technology, Telecom, Travel. Business-as-usual (BAU) campaign(s) could be conversion campaign(s) or Advantage Catalog Ad (A+CA). The results showed that campaigns with a higher A+SC budget share of 70% had a lower cost per result with 98% confidence than those with a lower A+SC budget share of 30%.

RECOMMENDATION

Equip Advantage+ shopping campaigns with the right budget, creative, audience and destinations to succeed in new markets.

- Budget**
 - Advantage+ shopping campaigns further improves as you scale in both new and existing markets.
 - 3% improvement in cost per purchase²** when increasing Advantage+ shopping campaign budgets from 30% to 70%.

Creative
Use an [international catalog](#) to localize your offering at scale.

Destination
Use [Shops ads](#)* to send customers where they're most likely to convert—your website or shop on Facebook and Instagram.

- Audience**
 - Upload existing local and international customers to inform the delivery system.
 - If entering a new market**, use expanded optimizations to drive mid-funnel conversions if lower funnel events are still scarce.

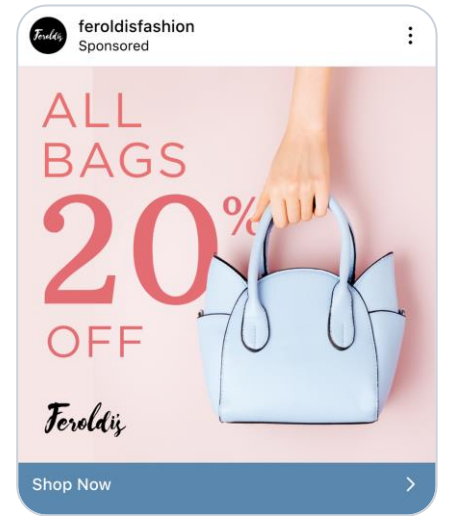

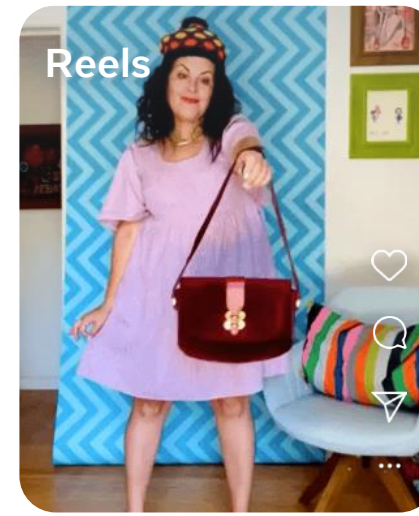

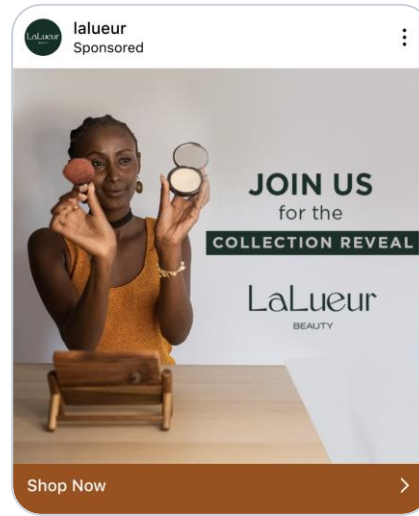

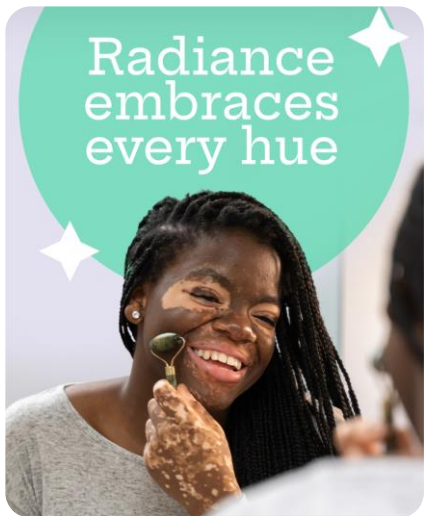

* For businesses with checkout-enabled shops that are either based or have legal presence in the US.

3 Creative diversification

People have various reasons for shopping internationally: they may seek better prices, higher quality, greater availability, alignment with brand values, or cultural experiences.

SOLUTION

Diversify concepts, formats and languages to enable AI to deliver the most relevant ad.

Diversify concepts

with visual execution around motivators and barriers to speak to multiple audiences:

- 👉 Emotional benefits
- 👉 Rational benefits
- 👉 Product benefits

Diversify formats

to appeal to various consumption styles. Consider:

- 👉 Capturing attention with [Reels ads](#).
- 👉 Collaborating with local creators using [partnership ads](#).

Diversify languages

with [dynamic language optimization](#) to deliver your ads in people's preferred language.

KEY INSIGHT

Diversified creative reaches more shoppers with relevant messages.

32%

increased efficiency.¹

9%

incremental reach.¹

RECOMMENDATION

Two approaches for cross-border creative diversification:

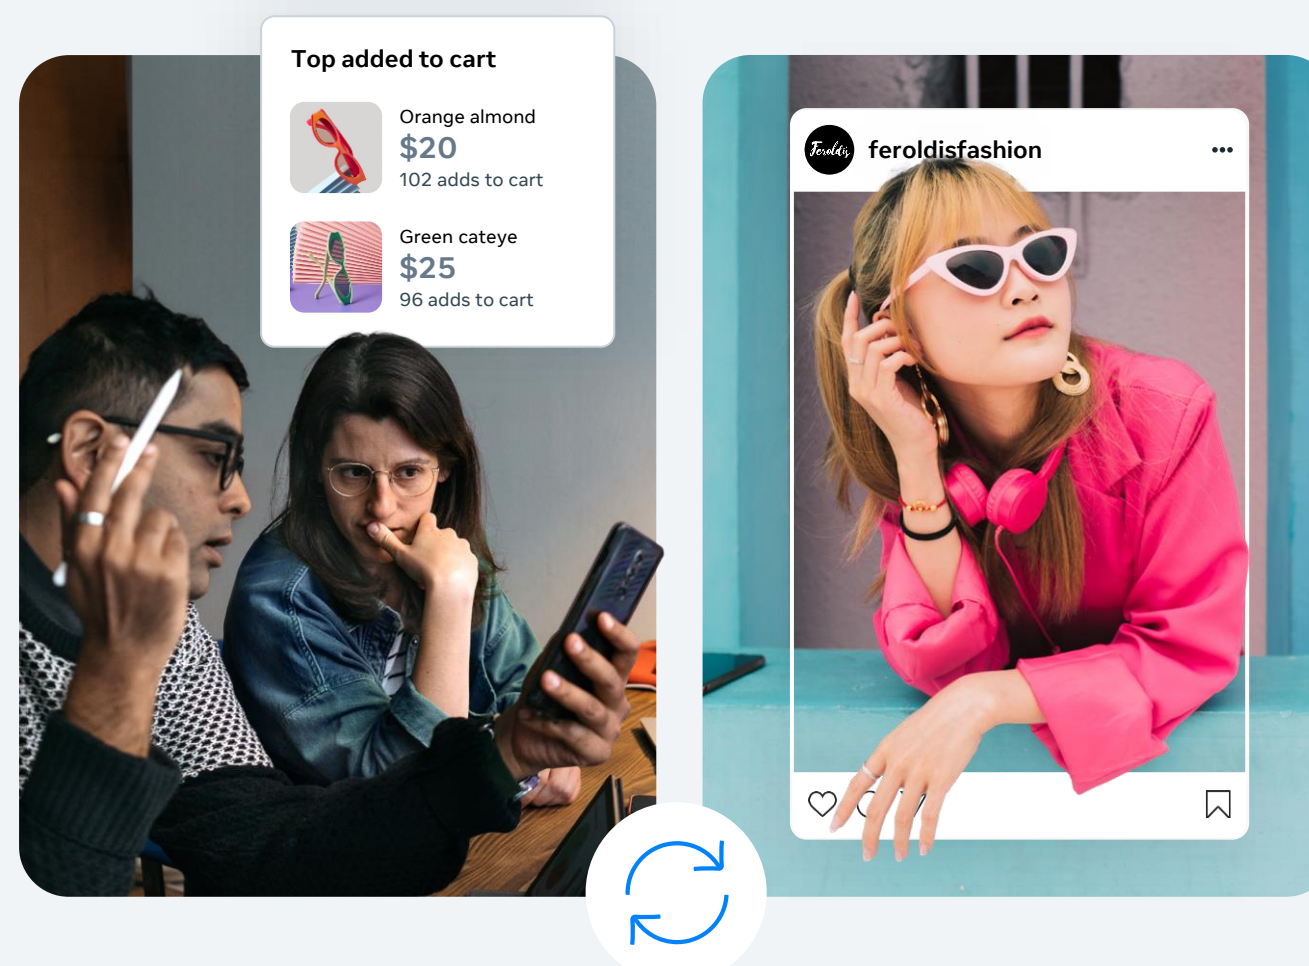

Insights-driven creative

Start by deep research then move to creative diversification.

Useful when targeting one market or a group of very similar markets.

Step 1: Start by deeply understanding the destination market(s), to understand barriers and motivators.

Step 2: Build diversified creative based on findings using the right messaging and executional ideas for local audiences.

Creative-driven insights

Start by creative diversification then iterate based on results.

Useful when targeting a group of disparate markets.

Step 1: Start by building diversified creative that meets general purchase motivators and barriers.

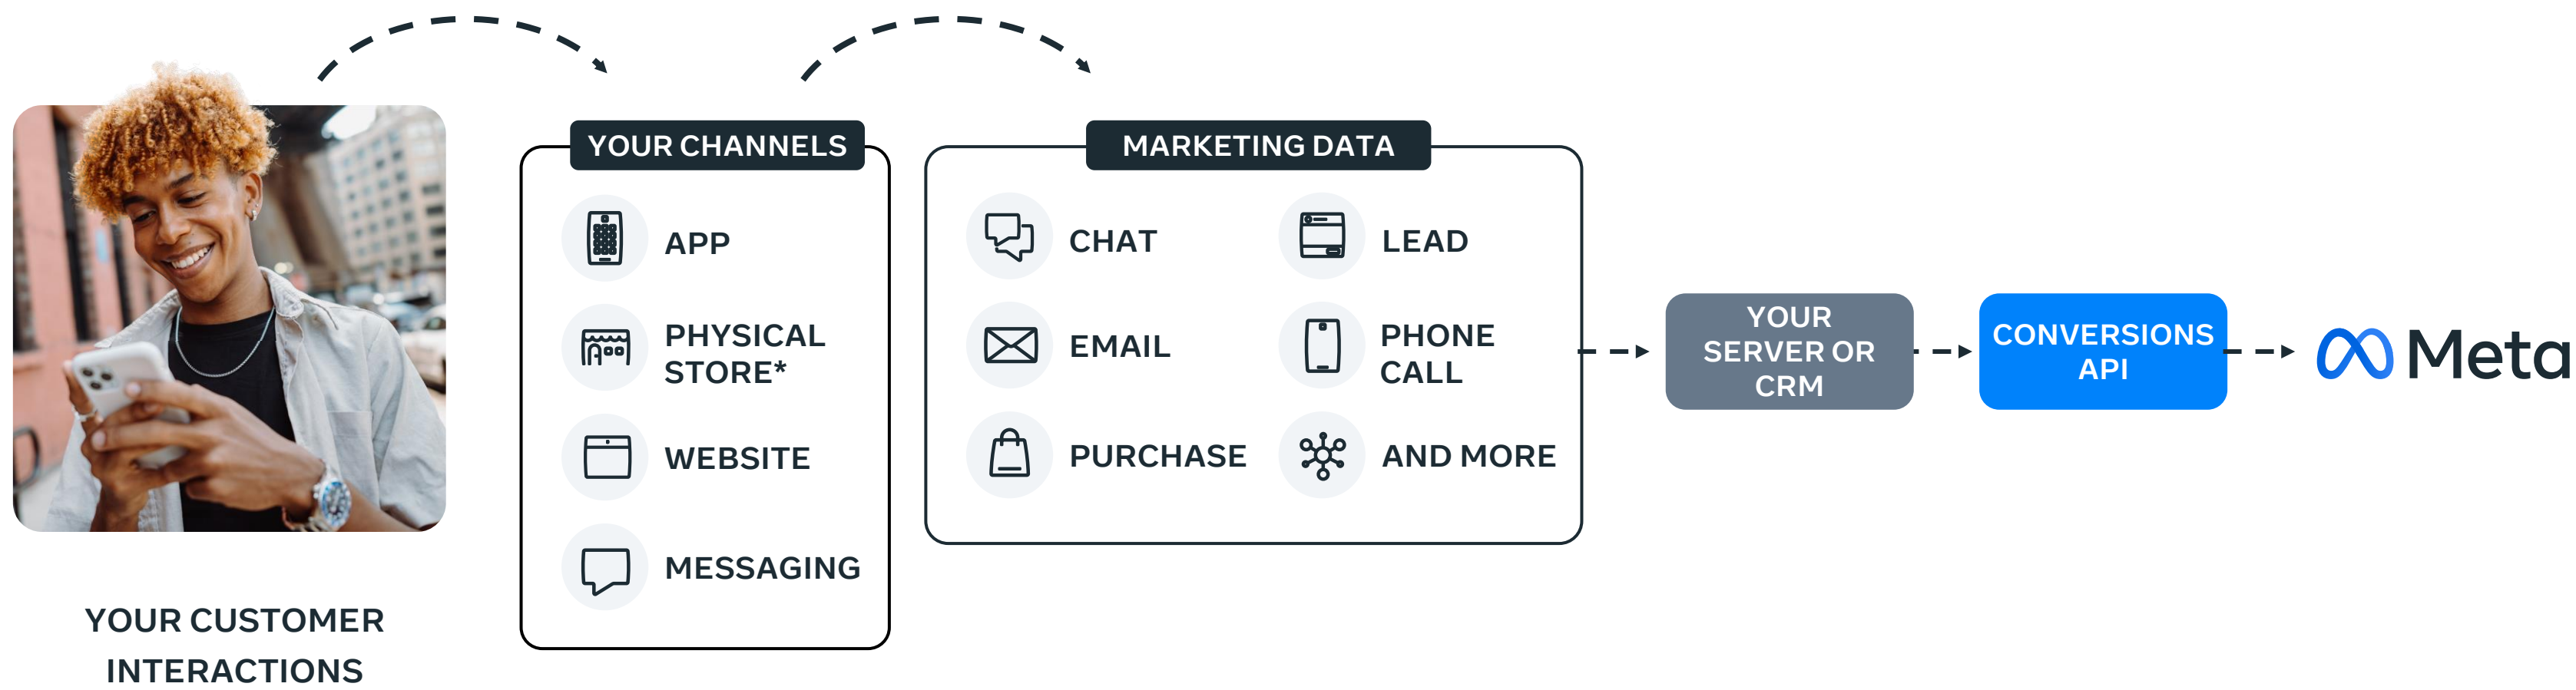

Step 2: Run creative together to deduce insights and inform next iteration of your ads.

4 Data quality

In unfamiliar markets, quality data can help inform advertising strategy. Data can help businesses benefit from learnings in existing markets or attribute what is driving success in new ones.

SOLUTION

A high-quality setup helps businesses better understand and connect with shoppers in new markets. Conversions API creates a direct connection between your marketing data and Meta across all your channels.

KEY INSIGHT

13%

cost per result improvement with the Meta Pixel and Conversions API.¹

RECOMMENDATION

Power your expansion goals with an effective data infrastructure.

If entering a market with lead generation goals:

[Integrate CRM with the Conversions API.](#)

15%

reduction in cost per quality lead compared to ads using the leads performance goal²

44%

increase in rate of converting a lead to a quality lead compared to ads using the leads performance goal²

OR

If entering a market that is big on messaging:

[Power click to message ads with a Conversions API integration.](#)

Source: 1- Based on 28 global A/B experiments of direct, partner or Conversions API Gateway integrations between May to August 2022. 2- Results based on A/B tests on 273 advertisers, with ads delivered globally from Jan 11-28, 2024, and included incentives. Results were statistically significant at a 95% confidence level. Performance may vary. Conversion from lead to quality lead occurs when a user takes a qualifying, lower-funnel action identified by the business, which moves them into a “quality lead” status. Qualifying actions or events vary by business, based on their individual sales funnel event stages.

5 Results validation

Measurement helps understand the true impact of international marketing and inform more effective strategies.

SOLUTION

By using [Conversion Lift](#), businesses can measure the incremental impact of ads and determine which marketing efforts generate the most ROI.

KEY INSIGHT

Organizations that invest in measurement are:

44%

more likely to exceed revenue goals.¹

RECOMMENDATION

Test design sample

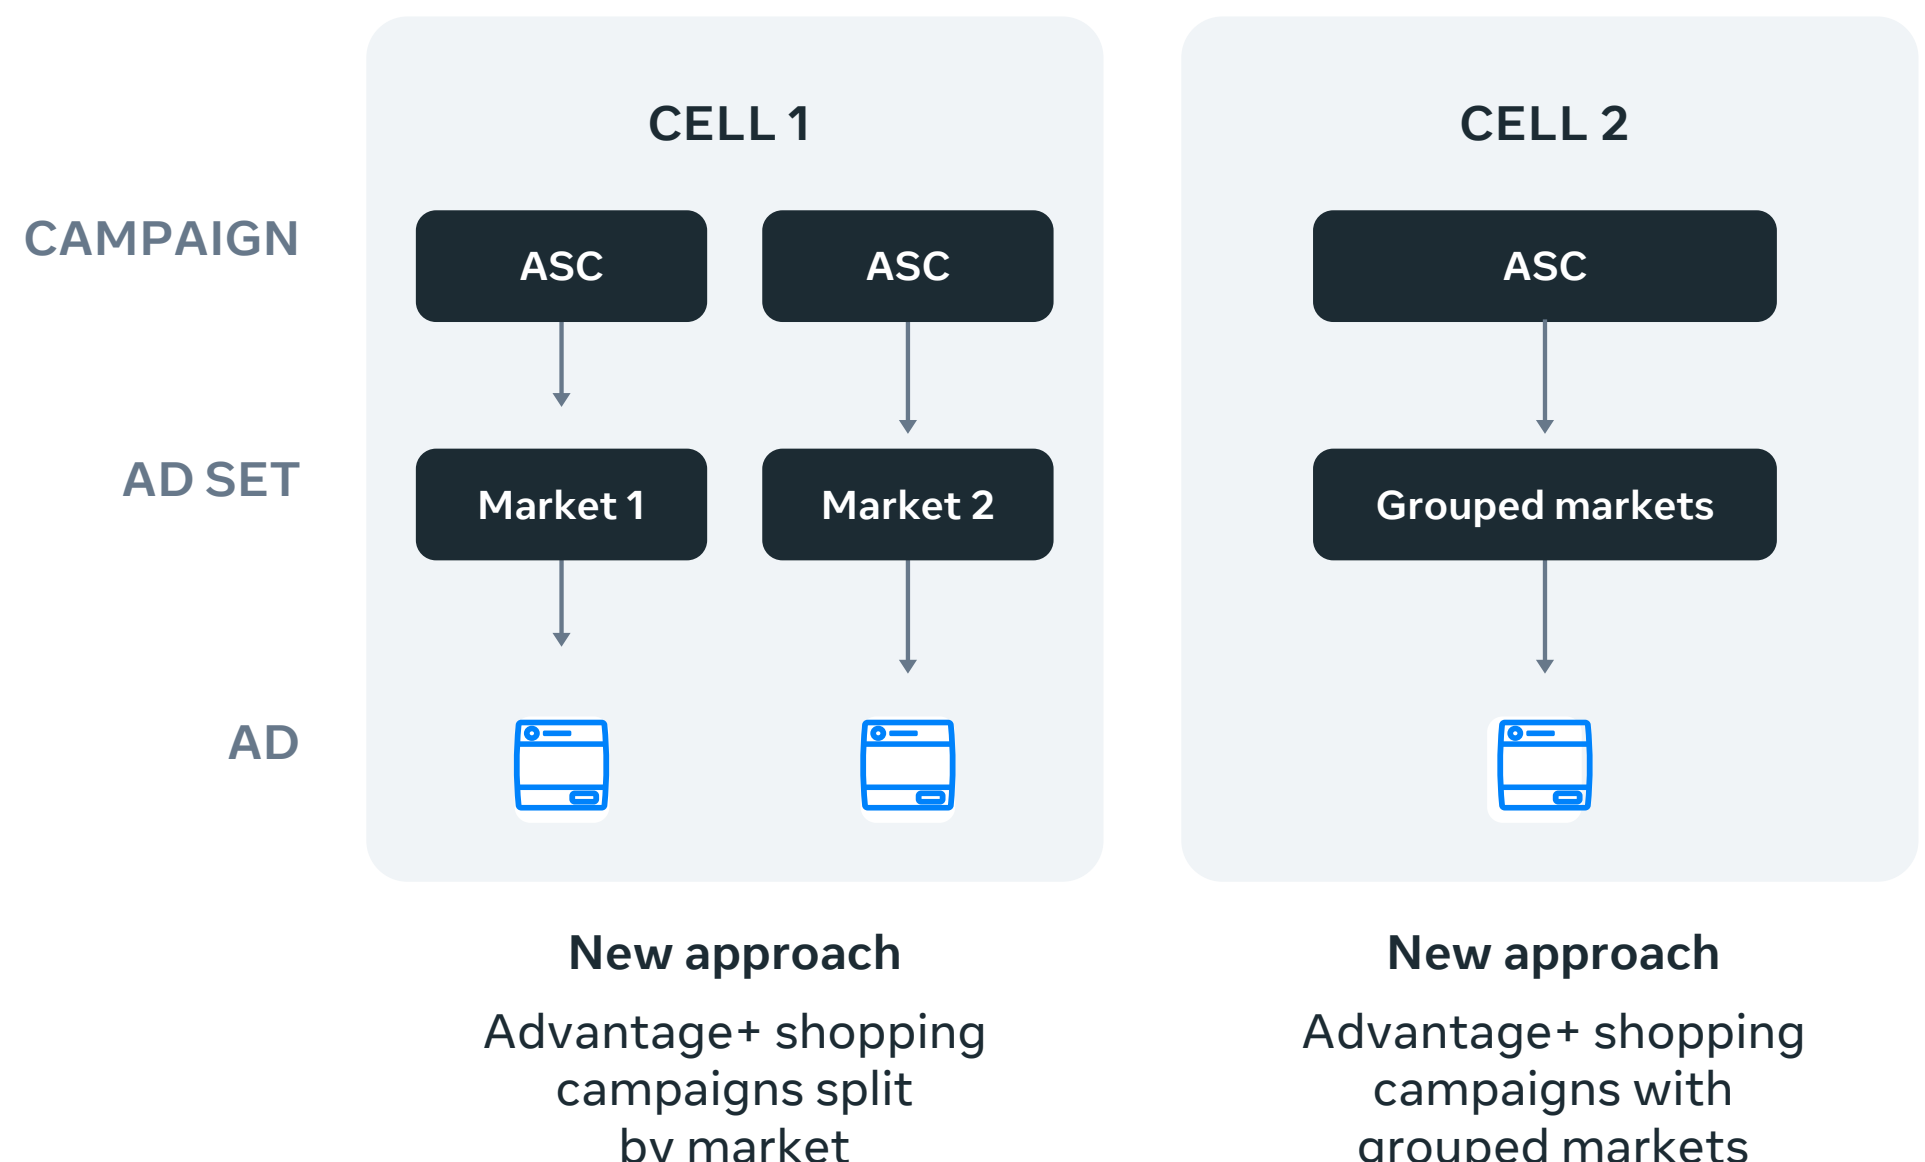

Does the Advantage+ shopping campaigns (ASC) perform better with grouped markets?

Recommendations

- Keep everything else constant across cells.
- For this test, we recommend limiting number of countries to <4.

Test structure

Conversion Lift preferred, if not, A/B test.

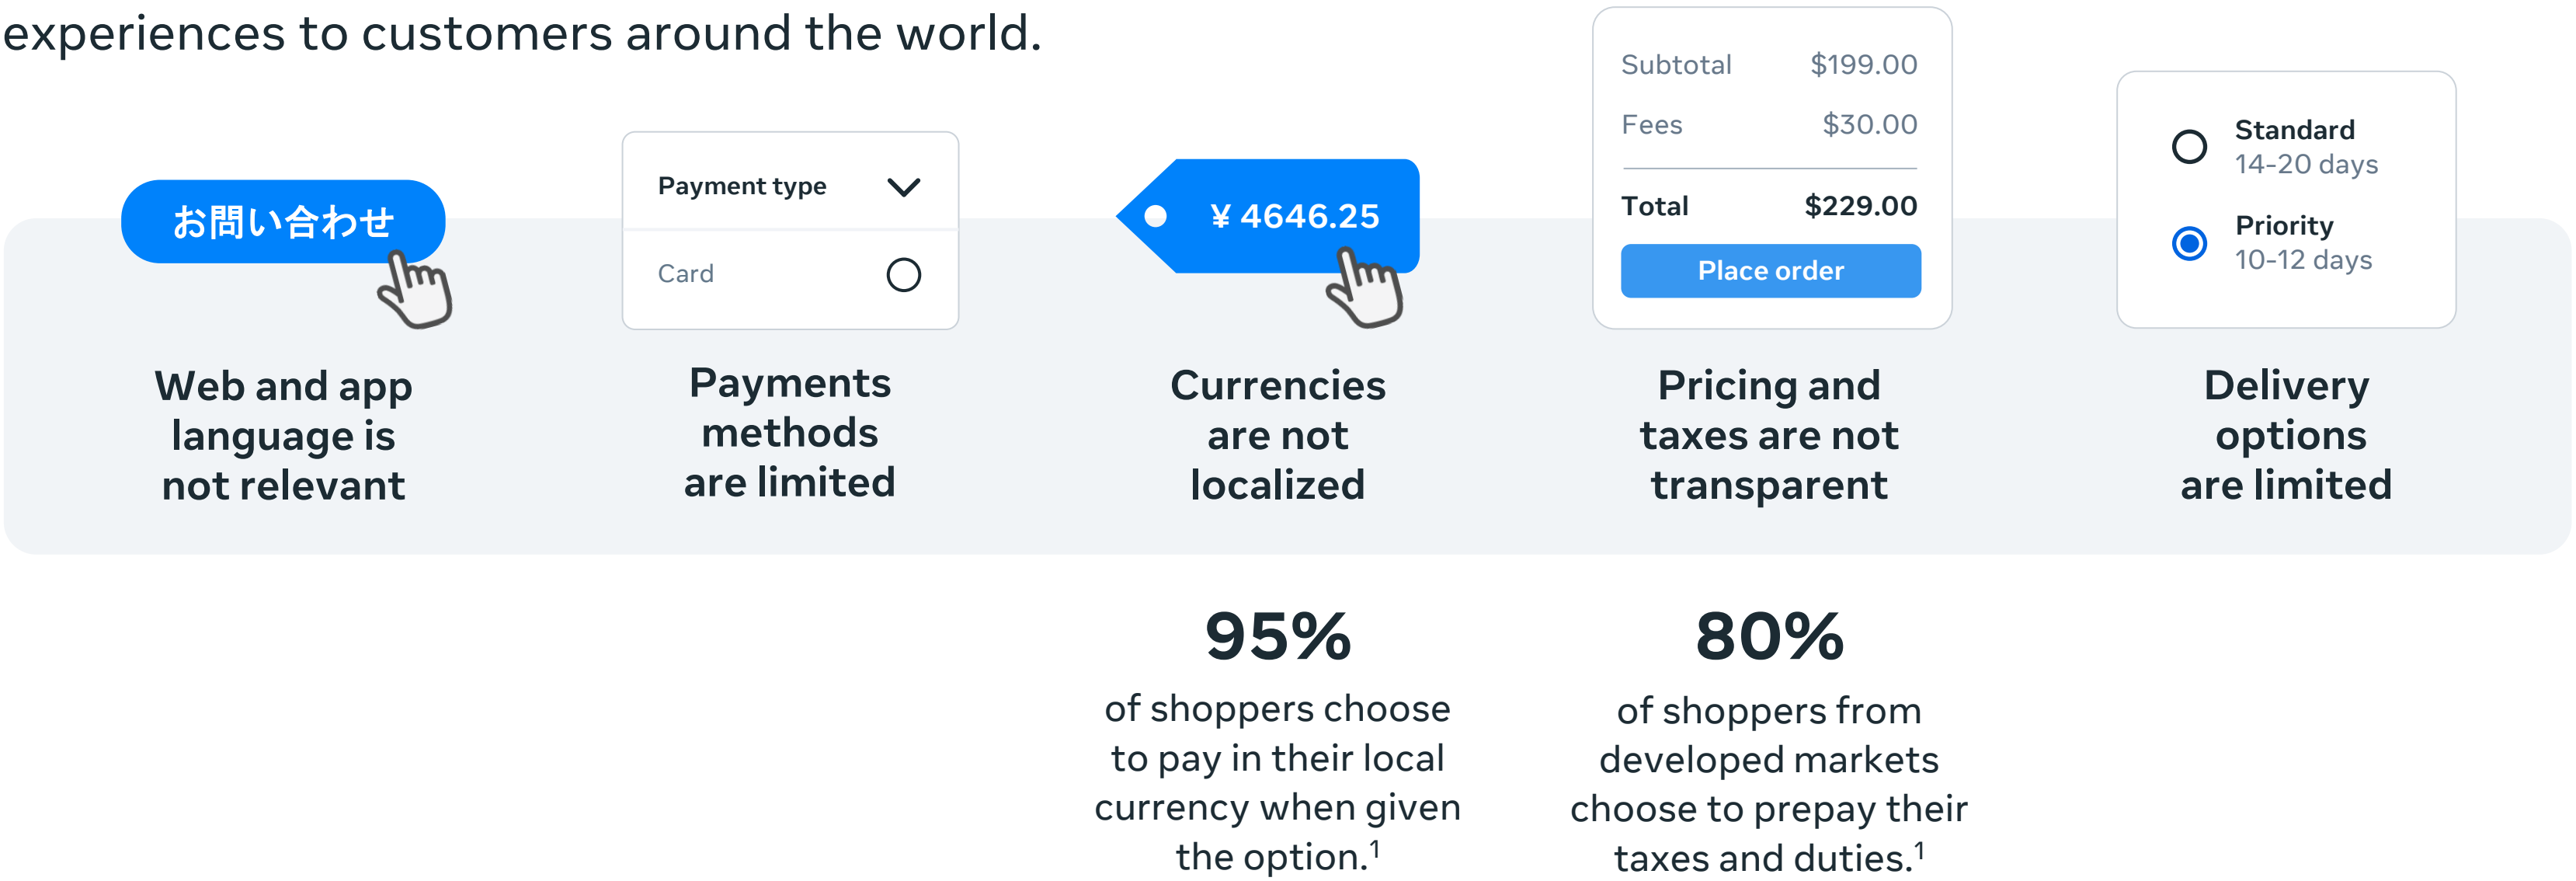

+

Cross-border operations

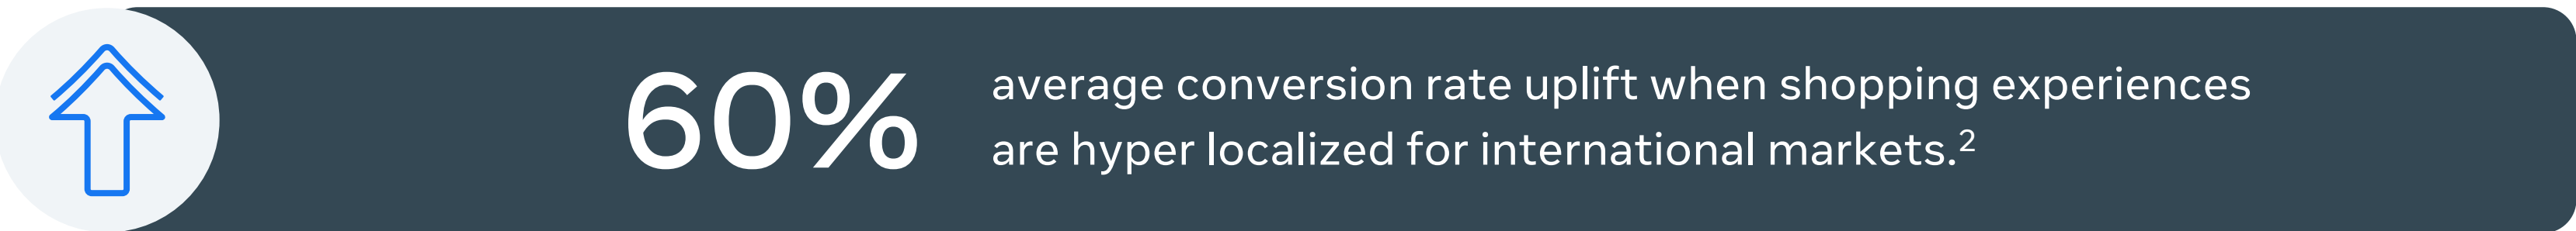

International shopping is often impeded by friction points that hinder seamless navigation and decision-making.

SOLUTION

From logistics and shipping to pricing and payments, our network of end-to-end [global expansion partners](#) can help businesses provide seamless cross-border buying experiences to customers around the world.

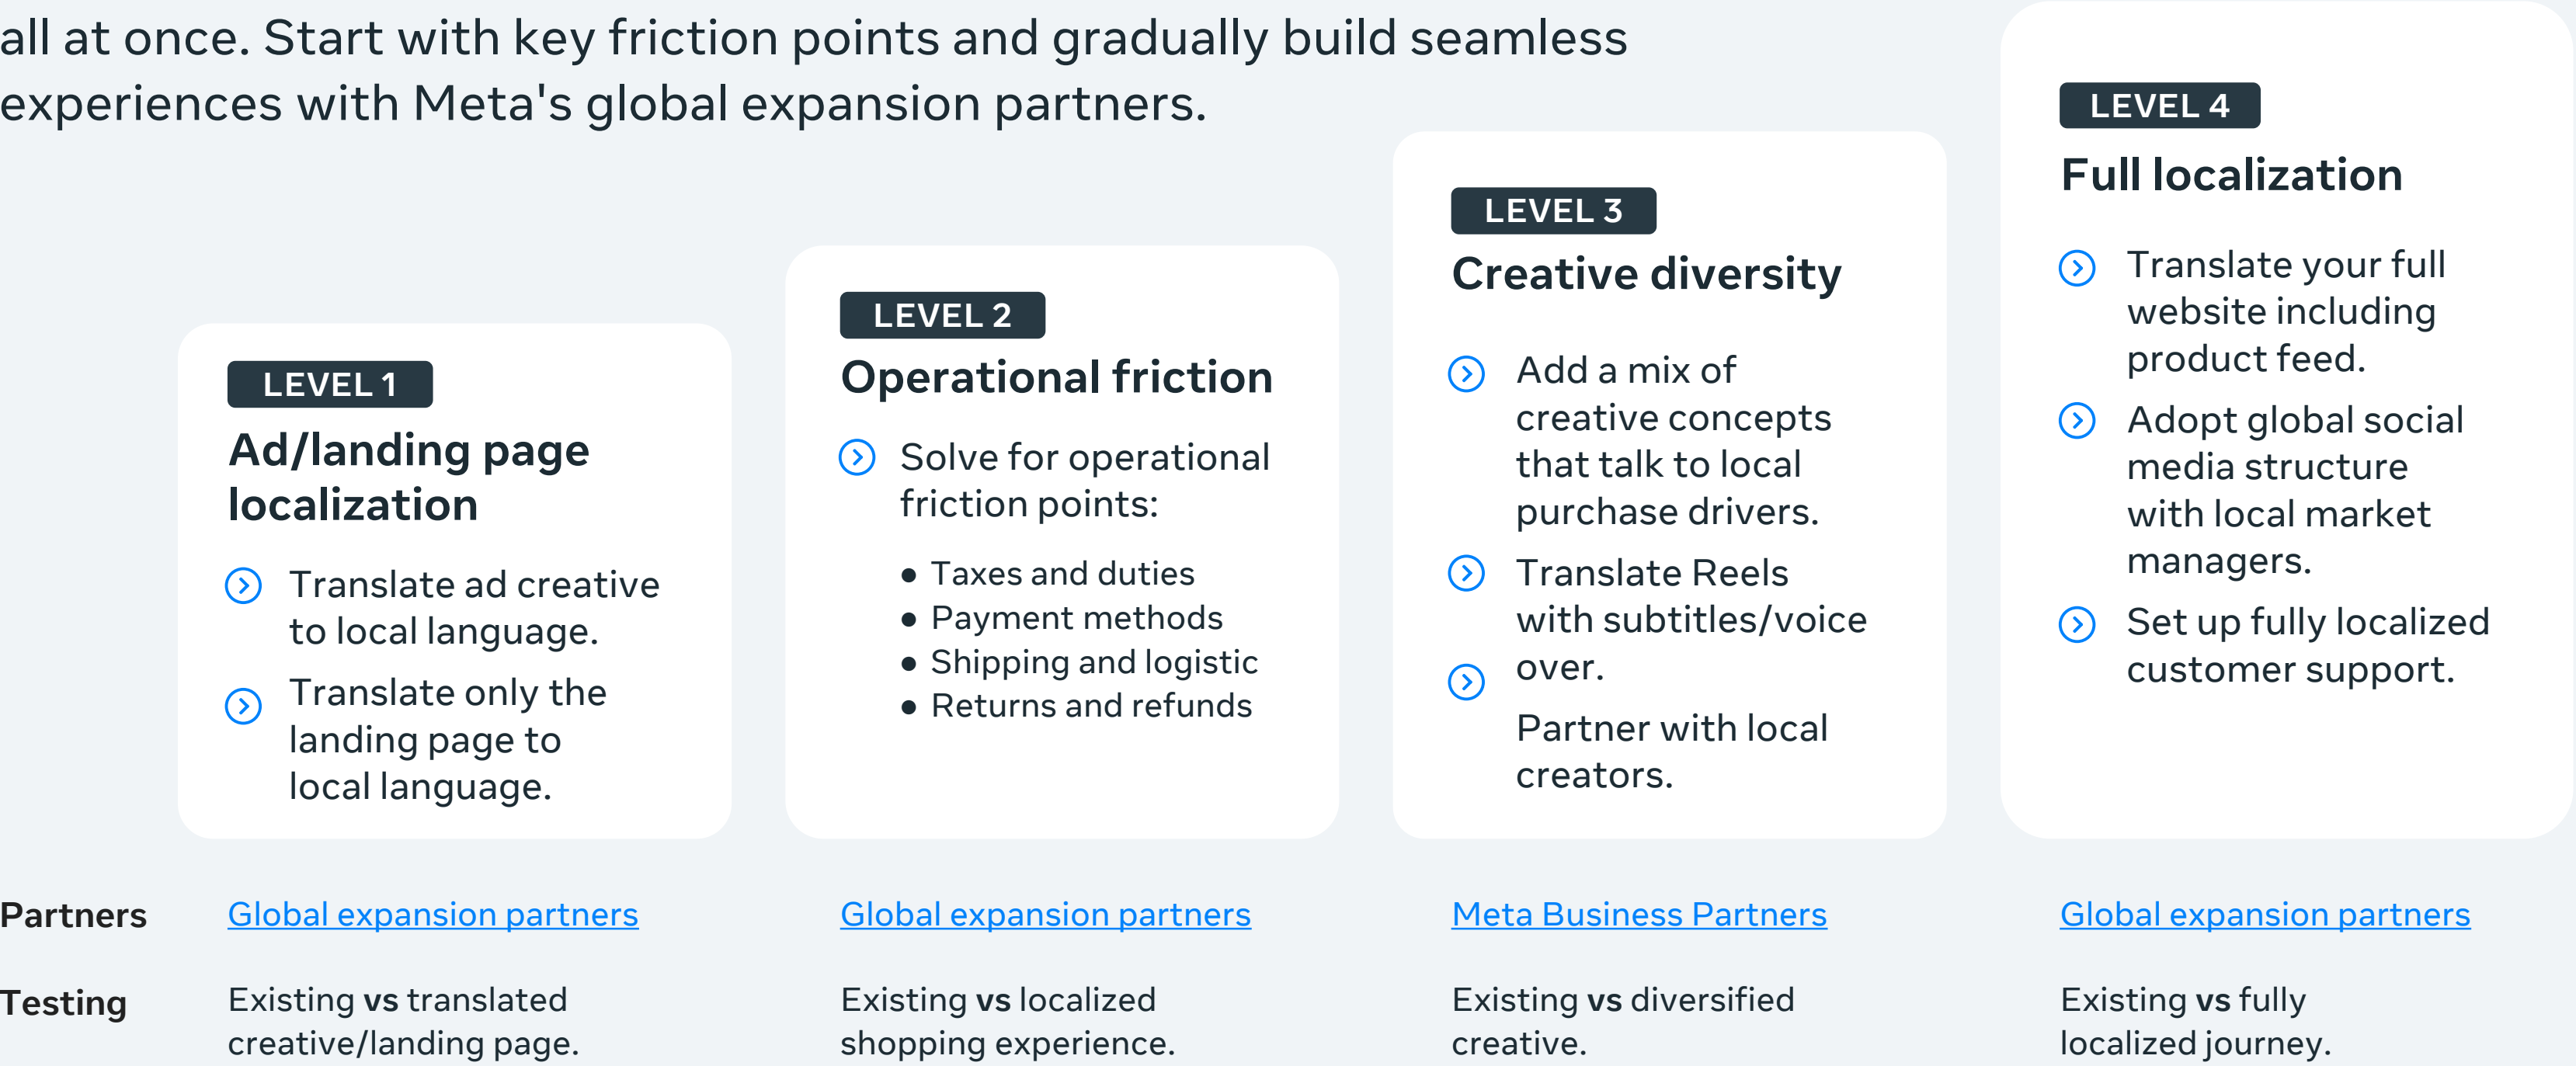

KEY INSIGHT

RECOMMENDATION

Setting up your business for cross-border trade doesn't have to happen all at once. Start with key friction points and gradually build seamless experiences with Meta's global expansion partners.

Source: 1-Global-e report May 2021. 2.Global-e report August 2023.

Success stories

Discover businesses who have used Performance 5 to unlock cross-border growth.

1

Account simplification

APAC → USA, CANADA, AUSTRALIA

Royaura set out to increase sales and return on ad spend. They recognised the need for a more automated approach to drive better efficiencies. Their team grouped all destination markets together in one ad set using Advantage+ shopping campaigns and achieved **32% lower cost per acquisition**.¹

2

Automation

UNITED ARAB EMIRATES → USA

As part of the brand's international expansion into the USA, Huda Beauty ran Advantage+ shopping campaigns with Shops ads and saw **41% lower cost per purchase** and **69% increase in purchases**.²

3

Creative diversity

AUSTRALIA → USA

The Oodie team wanted to reach a new audience in the US and improve brand awareness, consideration and sales during the holidays. They ran partnership ads featuring well-known creators and saw **41% incremental sales** and **66% lift in ad recall**.³

4

Data quality

USA → CANADA/EU/AUSTRALIA/JAPAN/SINGAPORE

PatPat wanted to increase their international reach and conversions at a lower cost while prioritising people's privacy. They used the Conversions API and Meta Pixel with Facebook Login to match ad metrics with individual profiles in a way that respects consent. They achieved **31% higher website sales conversion rates** and **2.2x higher return on ad spend**.⁴

5

Results validation

SINGAPORE → AUSTRALIA, CANADA, EU, UK

International jeweller J&CO wanted to connect with jewellery lovers in several countries more efficiently. They ran a test on multi-country Advantage+ shopping campaigns and saw **13% increase in return on ad spend**.⁵

+

Cross-border operations

UK → GLOBAL

Percival wanted to better capitalise on their impressive global traffic. They [partnered with Global-e](#) to merge their international websites and offer shoppers in over 200 destinations worldwide an advanced seamless and localised shopping experience. As a result, **international conversion rate increased by 180% year-over-year**.⁶

PERFORMANCE 5 SCORECARD

		Tactic	Goal*	Status
MEDIA	Account simplification	Reduce overall investment in learning phase.	< 20%	☐
		Consolidate ad sets by grouping all - or similar - markets.		☐
		Consolidate ad sets using 6+ placements.	> 90% of investments	☐
	Automation	Increase adoption of Advantage+ shopping campaigns.	>30%	☐
		Use a consolidated international catalog.		☐
CREATIVE	Creative diversification	Ensure healthy balance of video formats.	>30% on video	☐
		Ensure healthy balance of static formats (single-image, carousel).	>30% on static	☐
		Opt into Reels.		☐
		Reels opt-in with creative essentials (9:16 video, with audio, in the safe zone)		☐
		Diversify language with dynamic language optimization.		☐
DATA	Data quality	Implement the Conversions API alongside the Meta Pixel.	Server to browser ratio > 90%	☐
MEASUREMENT	Validate results	Run conversion lift tests to measure incremental value of ads.	Quarterly	☐

OPERATIONAL FOUNDATIONS CHECKLIST

LOCALIZATION	Shopping journey	Provide people with a fully localized journey including copy, product catalogs, currencies, payment methods and address formats.		
	Client support	Provide local-level customer service respecting time zone differences, order tracking and local language.		
	Taxes and duties	Ensure full cost is displayed at checkout to afford transparency and drive repeat sales.		
PAYMENTS	Payment methods	Offer shoppers a range of payment types and tailor them to maximize conversion. Adopt technology to prevent potential fraud.		
	Fraud prevention	Implement robust fraud detection systems and utilize secure payment gateways to prevent fraud.		
DELIVERY	Warehousing	Consider the options of hub (fulfilled from partner) or hub-less (fulfilled from own distribution centre) logistics model.		
	Cost and service	Examine the end-to-end shipping experience including speed, tracking of delivery, minimal or free shipping cost and best service.		
	Returns and refunds	Ensure refunds are issued in a timely and fast process. Consider local hubs for faster and more cost-efficient refunds.
